

Fitting Linear Mixed-Effects Models

D. Bates, M. Maechler

Abstract

Sentence a0 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence a1 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence a2 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence a3 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence a4 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence a5 explains how the mixed model parameters are estimated by maximum likelihood.

1 Introduction

Sentence b0 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence b1 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence b2 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence b3 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence b4 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence b5 explains how the mixed model parameters are estimated by maximum likelihood.

2 Methods

Sentence c0 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence c1 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence c2 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence c3 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence c4 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence c5 explains how the mixed model parameters are estimated by maximum likelihood.

2.1 Estimation of effects

Sentence d0 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence d1 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence d2 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence d3 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence d4 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence d5 explains how the mixed model parameters are estimated by maximum likelihood.

3 Results

Sentence e0 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence e1 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence e2 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence e3 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence e4 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence e5 explains how the mixed model parameters are estimated by maximum likelihood.

4 Discussion

Sentence f0 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence f1 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence f2 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence f3 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence f4 explains how the mixed model parameters are estimated by maximum likelihood.

Sentence f5 explains how the mixed model parameters are estimated by maximum likelihood.
